

## Topics in the Theory of Lifting

Filesize: 2 MB

### Reviews

*Extensive guideline! Its such a great go through. It is definitely basic but surprises in the 50 % of the pdf. It is extremely difficult to leave it before concluding, once you begin to read the book.*

Springer Okt 2013, 2013. Taschenbuch. Book Condition: Neu. 229x152x11 mm. This item is printed on demand - Print on Demand Neuware - The problem as to whether or not there exists a lifting of the  $M^t/$ . 1 space ) corresponding to the real line and Lebesgue measure on it was first raised by A. Haar. It was solved in a paper published in 1931 [102] by J. von Neumann, who established the existence of a lifting in this case. In subsequent papers J. von Neumann and M. H. Stone [105], and later on J. Dieudonne [22], discussed various algebraic aspects and generalizations of the problem. Attempts to solve the problem as to whether or not there exists a lifting for an arbitrary  $M^t/$ . space were unsuccessful for a long time, although the problem had significant connections with other branches of mathematics. Finally, in a paper published in 1958 [88], D. Maharam established, by a delicate argument, that a lifting of  $M^t/$ . always exists (for an arbitrary space of a-finite mass). D. Maharam proved first the existence of a lifting of the  $M^t/$ . space corresponding to a product  $X = \prod_{i \in I} X_i$  and a product measure  $\mu = \prod_{i \in I} \mu_i$  with  $\mu_i = \mu_{i'}$  for all  $i \in I, i \neq i'$ . Then, she reduced the general case to this one, via an isomorphism theorem concerning homogeneous measure algebras [87], [88]. A different and more direct proof of the existence of a lifting was subsequently given by the authors in [65]. A variant of this proof is presented in chapter 4. 192 pp. Englisch.
