The ore or shearage zone appears to be in the form of a long gigantic lens, thickest in the middle and diminishing north and south along the Btrike of the so called vein. The great width of the vein or zone requires the uge of square sets, as many aa five sets of 6 feet centers, side by aide, being used across the vein and up the slopes, the square sets following the stones right up as stoping progresses. In some of the very wide places the square sets remind us of the excavation rather of a very wide coal seam than of a gold vein. The zone is oxidized to as great a depth as is at present reached, viz., nearly 1,000 feet. Spurs come in in places diagonally into the main vein or zone,...
