

## Molecular Characterization of Major ribosomal DNA in *Clarias batrachus*

Filesize: 6.29 MB

### Reviews

*This kind of publication is every thing and got me to searching in advance and much more. It really is simplistic but surprises within the 50 percent from the ebook. I am easily could get a satisfaction of studying a composed publication.*

LAP Lambert Academic Publishing Aug 2012, 2012. Taschenbuch. Book Condition: Neu. 220x150x4 mm. This item is printed on demand - Print on Demand Neuware - With the invention of PCR, knowledge of evolution of DNA, particularly of fish and phylogenetic relationships of fish has increased rapidly. This enzymatic cloning technique, together with direct sequencing has simplified and dramatically accelerated the accumulation of DNA sequence information. rDNA (ribosomal DNA) are organized as multiple copies of a repeated unit consists of transcribed zone with coding regions for the 18S, 5.8S and 28S RNA genes, internal external transcribed spacers and surrounded by non-transcribed spacer sequences. In present work, the DNA of *Clarias batrachus* was amplified with specific primers and observed for molecular, genetic characterization and phylogenetic analysis. The evolutionary relationship of *C. batrachus* was established by phylogenetic tree. The overall base size of sequence of various fragments of 45S ribosomal DNA that contain 18S, ITS1, 5.8S, and 28S coding region is 5020 bp long. The results obtained in these aspects enrich the knowledge of *C. batrachus* at molecular level and helps in public database stock. These new sequences will contribute to a better understanding of the patterns of evolution of this scarcely studied genus. 68 pp. Englisch.
